Project Details

- **Scenario**
  - Suppose you are building a system where users can create account, log in and post feeds as simple messages.
  - Users can add feeds to app or may be they can view all feeds posted in the app or they can even view feeds from specific user if they know users email address.

- **End Points Required**
  - /signup to signup the users
  - /login to signin the users
  - /addfeed to add feeds to database. Auth Req
  - /myfeed to view feeds added by the user himself. Auth Req
  - /all to view all feeds. No Auth req
  - /userfeed to view feed from specific user. Pass user email from query param but not from JSON. Auth Req

- **Submission Details**
  - If gorm is not used I suppose that you will create tables manually then please put all database queries in one file db.txt and add it to project. Queries to create database and tables.
  - Please create one file containing all JSON request that you will send to the server. And mention corresponding endpoint as well.

- Put name of yours in main.go file in comment at the top.
- Please zip or rar your complete project. Please make sure all folders are added in rar.
